

## Preparing a Personal Balance Sheet

Taking control of your financial future is a process. And, as with any process, it is important to monitor your progress. One of the best ways for an individual to measure financial progress is to periodically prepare a personal balance sheet. The personal balance sheet worksheet shown below helps segregate investment assets and can be used as a basis for your periodic progress measurements. It is broken into three parts to help you better understand your investments, your total financial picture and your annual progress.
